NO NEED TO CHECK...

PASSENGER SAFETY FIRST

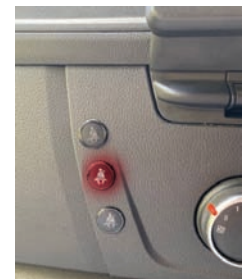

ALERTS THE DRIVER OF SEAT BELT USE AT ALL TIMES

IDEAL FOR COACH, MINIBUS, PTS AMBULANCE AND VEHICLES DESIGNED TO TRANSPORT PEOPLE WHO MAY NEED EXTRA MONITORING DURING A JOURNEY

High-tech seat belt warning system for all vehicle applications. The system can be fitted on **ALL SEATS** - turning, removable and even wheel chair docking seats. Notifies the driver when a passenger or patient has either forgotten to engage their seat belt or undone their seat belt whilst the vehicle is in motion. This is done by a red indicator light on the dashboard followed by an audio alert, once the seat belt is once again engaged the light and audio warnings stop.

The Blue Light INNOVATION GIVES YOU:

- Increased passenger safety
- Alerts the driver if a passenger has unfastened their seat belt
- Stops the need for the driver to take their eye off the road
- Dash board mounted alongside OEM dials
- Both audio and visual alerts – a RED LIGHT warning followed by audio alert
- Seats can be removed by simply unplugging from the vehicle wall
- Can help to reduce your risk profile on Medical Malpractice insurance.

BLS IS AN APPROVED RENAULT UK CONVERTER

With over 100 base vehicles available - you will always get your build on time and in budget.
